Do you know what an MOT Test involves?

Following the changes to the MOT Test, brought in last year, it is worth noting that when we carry out an MOT Test, we check for the following:

- Underinflated tyres.
- If the brake fluid is contaminated.
- For fluid leaks which pose an environmental risk.
- Brake pad warning lights and if the brake pad or discs are missing
- Reverse lights on vehicles first used from 1 September 2009.
- Headlight washers on vehicles first used from 1 September 2009 (if they have them).
- Daytime running lights on vehicles first used from 1 March 2018 (most of these vehicles will have their first MOT in 2021 when they're 3 years old).
- For those vehicles with a diesel particulate filter (DPF). We will check for smoke of any colour coming from the exhaust or if it has been removed or tampered with. If we find either of these, the vehicle will fail its MOT.

Defect types:

✗ Fail

Dangerous – a direct and immediate risk to road safety or has a serious impact on the environment.

Major – may affect the vehicle's safety, put other road users at risk or have an impact on the environment.

✓ Pass

Minor – no significant effect on the safety of the vehicle or impact on the environment.

Advisory – it could become more serious in the future.

Pass – it meets the minimum legal standard.

At Jordan Motors Ltd we will guide you through the MOT process.

Book your MOT with us for only £39.99. Call us on 0116 289 2308 and quote 'SummerMOT'.

Buying a new car this year?

Consider those which are more fuel efficient, especially with the cost of fuel steadily rising.

Here is a great link which looks at the most fuel-efficient cars and what to consider when purchasing a new car...
